

Information Comes At You Fast... Are you Ready?

- ◆ Standardize and automate business processes
- ◆ Increase reliability of processes and policies
- ◆ Decrease operating expenditures
- ◆ Ensure consistent quality across your entire organization

Information comes at you fast and can overwhelm organizations that lack the tools and agility to adapt to rapidly changing business demands. SCG has developed an innovative process management tool to keep you in the driver's seat. The Staser Information Management System (SIMS) provides access to rapidly evolving processes and offers real-time visibility into your organization's health and performance. SIMS integrates five key pillars of effective decision-making and operations: strategy, policy, process, people, and technology.

SIMS provides a central repository for formal, published policies, standard operating procedures, forms, and other documentation related to organizational processes. SIMS has been implemented effectively for a range of purposes, including:

- ◆ Organizational Change Management/Transition Management
- ◆ Software Engineering/Requirements Engineering
- ◆ Training
- ◆ Performance and Process Management

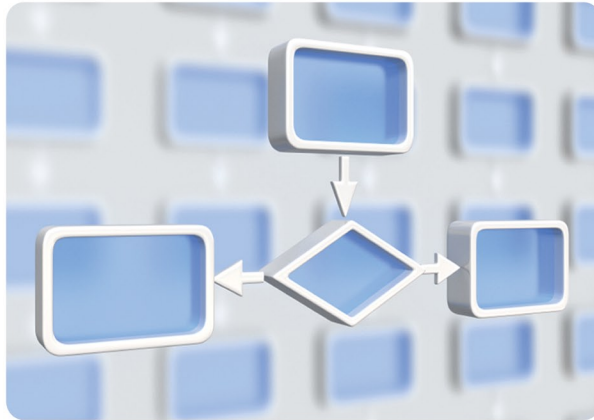

Emerging trends in management and leadership increasingly rely on effective process management to adapt to change, ensure global competitiveness, foster innovation, and lead organizations through transition. SIMS extends the concept of process management excellence and provides a unique business intelligence tool for 21st century knowledge workers to access the information when they need, how they need it.

"Virtually everything in business today is an undifferentiated commodity except how a company manages its information."

How you manage information determines whether you win or lose."

~Bill Gates, Microsoft

Features and Benefits

- ◆ Implement change effectively across your entire department, business unit, or organization
- ◆ Streamline communication between software developers and subject matter experts
- ◆ Improve process efficiency
- ◆ Apply metrics-based management using process management concepts and tools

We have helped our clients use SIMS to effectively communicate user requirements to software developers, implement business process changes across and within business units, and document the platform of tools and policies needed to execute day-to-day operations. Using SIMS to document, manage, and communicate processes and policies, we can help your organization reach new levels of efficiency, accountability, and productivity.

Technical Specifications

- ◆ Composite, SharePoint-based application
- ◆ Dual portal design integrates collaboration and end-user access
- ◆ Leveraged collaboration and document management capability
- ◆ Custom C# web-parts for rich navigation
- ◆ Full-content indexing
