

Do pathways of regulation and compliance have you lost or confused?

Modern, complex legal and regulatory environments demand compliance across an organization, including business processes as well as data and information systems.

"The conventional definition of management is getting work done through people, but real management is developing people through work."

~ Agha Hasan Abedi

As the global economy becomes increasingly complex, governments and regulatory agencies seek more oversight over most organization's activities. In fact, modern, complex legal and regulatory environments demand compliance across an organization, including business processes as well as data and information systems.

In addition to subject matter expertise in all facets, SCG offers focused consultation on business and data rules and processes related to Regulatory Affairs. We have extensive expertise with Corps of Engineers (Civil Works) HQ COE-CW, EPA, FERC, HIPAA, DoD, Sarbanes/Oxley, Patriot Act, ISO 15926 and ANSI regulations and standards. Whether it's information management program design, transition to a digitized platform, or data acquisition and delivery, we're here for you.

Almost every industry or venture is affected by regulators in some way—which means that no organization can afford to ignore the complex requirements of data and information systems in a regulated environment. From security, compliance, and privacy, to data accuracy, delivery, and analytics, the cost of data that doesn't meet regulators' needs is staggering. At SCG, we can help you navigate the complex waters of a regulated environment, all with the goal to optimize your data and information systems. After all, our goal is to help you realize yours.

Features and Benefits

- ✦ Legal and regulatory compliance
- ✦ Increased transparency and efficiency in regulated activities
- ✦ Streamlined data acquisition and access
- ✦ Comprehensive data integration and analytics

SCG has extensive experience at every level of the process, from within agencies and from the point of view of applicants or interested parties. Participating on the Presidential Commission for Western Water Policy, public hearings throughout the West were coordinated with on-going Policy and Rule Making at the highest level of federal and State government.

On the Tongass Timber Reform Act, some 22,000 public comments were recorded and cross-referenced for rapid review and incorporation into the inter-agency 10-year Tongass Land Management Plan. Driven by both federal and State regulations, such complex management plans are often challenged in Court by affected parties. Poor data management can be used as a deliberate weapon to delay action. Justice is not served when information, or lack of access to critical data, is unavailable due to inadequate information management. In our experience, there is no substitute for timely, accurate access to reliable information when the stakes are high and time is critical.

Members of our team have had Regulatory experience from Congressional law making, to Senior Executive Management of National Regulatory Programs, to and including local program management in Alaska. We have prepared, defended and implemented Federal Permits for complex large-scale engineering programs including 240 remote sites throughout Alaska and at the Port of Anchorage.
